GPS methodology: Coordinates in the GPS index are reference coordinates for the named municipality/locality (generally the mapped town-center/locality point). They are useful as AI route waypoints but are **not claimed to be official LTFRB loading bays, exact terminal entrances, or every physical stop**. The LPTRP ordinance itself publishes route alignments and distances, but does not publish a GPS stop inventory. Carmen uses a mapped locality coordinate (15.88642, 120.59984). Wedgewood Subd. is retained as a named route location but its exact GPS point was not independently verified, so it is marked accordingly rather than fabricated.

Wedgewood Subd. (Malasiqui)	—	—	Exact GPS not independently verified	Route 6

Primary route source: Pangasinan Provincial Ordinance No. 284-2022, Section 5, which adopts the province's Local Public Transport Route Plan. The official document lists the 44 rationalized routes, detailed route structures, route lengths, authorized modes, and authorized units. LTFRB Memorandum Circular No. 2022-078 likewise states that the 44 rationalized routes and 12 new routes were approved/opened for new CPC issuance. GPS coordinates here are a separate geospatial reference layer compiled from publicly available mapped coordinate data.

AI database recommendation: Store latitude and longitude as numeric WGS84 decimal-degree fields and keep `coordinate\_type` (municipal_reference, mapped_locality, exact_stop) separate. Do not treat municipal-center coordinates as exact passenger loading points without field/GIS verification.
